

NetSpan MultiStar™ LT

Easy-to-use hub for LocalTalk networks

NetSpan's easy-to-use MultiStar LT hub helps simplify the wiring of your Macintosh workgroup for greater reliability at an affordable price.

The MultiStar LT also helps you easily connect your LocalTalk workgroup to an Ethernet network through NetSpan's MultiRouter EN/LT.

FEATURES

- 12 active ports at lowest available cost per port
- Compatible with standard telephone wiring and accessories
- LEDs indicate data traffic on each port aid in running network diagnostics
- Convenient front-panel switches turn ports on and off
- Rugged metal enclosure with rack mount option
- Low power consumption for cool, low-cost operation
- External power transformer reduces internal heat

NetSpan's MultiStar LT hub lets you expand your Apple LocalTalk network, simplify wiring and increase reliability at an affordable price — all without the headache of network management. Each MultiStar LT unit connects up to 48 AppleTalk devices in an active star configuration using ordinary telephone wire.

The hub's sophisticated circuitry does not require special control wiring or additional management software, so you can just plug it in and watch it go.

The MultiStar LT reclocks, reshapes and regenerates data packets as it sends them throughout the network. As a result, the data maintains its integrity, while it avoids the collisions that occur on noisy, crowded daisy chain, trunk and passive star topologies. The

MultiStar LT even eliminates many problems not resolved by competing LocalTalk hubs.

So call NetSpan today at 214-690-8844. Find out more about what the MultiStar LT can do to improve performance on your LocalTalk network.
